

We have a **CONTAMINATION** Situation

Not all plastics are recyclable...and our community's recycling is ***SUPER*** contaminated with a lot of non-recyclable plastics.

■ The **ONLY** plastics that belong in the recycling are **BOTTLES, JARS, and JUGS**. That's it. All other plastics go in the trash.

■ What happens if I recycle the wrong plastics?
When the recycling mix is too contaminated, the recycling facility may have to put everything, even the good recycling, in the regular trash.
